

## An innovative and effective alternative to TMSFA *Intervention and Instruction for Middle Schools in Texas*

### **Save Time. Reduce Teacher Workload.**

Approved by the Texas Education Agency as an alternative to the Texas Middle School Fluency Assessment (TMSFA), Istation's computer-adaptive assessment provides the data collection points and progress monitoring required by HB 2237.

Istation's intensive reading instruction and intervention support students in grade 7 who did not demonstrate reading proficiency on the grade 6 STAAR.

### **Screen Students. Monitor Progress.**

Automatically screen and progress monitor students in 30 minutes both at home and at school 3 times a year or more. For more frequent progress monitoring, assessments can be given monthly or additional on-demand assessments are available.

Administer assessments on school computers, laptops, and tablets, and get immediate on-line access to accurate results. Personalized data profiles help teachers prioritize and target opportunities for student growth.

### **Personalize Instruction. Extend Learning.**

Based on student responses to test questions, assessments adapt to precisely measure student ability and skill development within subtests. Students are then placed on their own individualized learning paths so *they get the instruction they need, when they need it*. Finally, educators have access to over 4,000 easy-to-use explicit and systematic teacher resources to facilitate quality, small-group instruction.
